

Name: Zijun Liu

Course: COEN1550

Instructor: Beth Myers

Date: 03/11/2019

Reflection3

1. What does your mentor do well?

In Spring 2019 semester, I'm glad to have a chance to work with graduate mentor with research projects. I think my mentor Brian is a good mentor, especially in helping me coding. When I stuck in somewhere, he always helped me in this area and guide me figure this out.

2. What could your mentor improve?

I think that my mentor improves systematically teaching me knowledge. Some topic is hard and I can't understand it if I just know a part of it. However, I can understand it, because it will spend much more time to understand the knowledge, so most of people won't spend more time on systematically teaching.

3. Do you have any other comments about your experience?

I want to instructor gives us more experience on research chance, I think Professor Beth already gives us some chance, but most of the chances are hired people or funded less people, so I think the professor should give us more chance as volunteer or independent study to work on the area, which student interested in. About why I want to have some chances as volunteer. Because some students are not good, but they still want to work as research assistant, so if we can have chance to work as volunteer, it might be help me to do some work. In some part, it can help professor's research project, also it might improve student's ability.
