Name: Zijun Liu

Course: COEN 1550

Instructor: Beth Myers

Date: Feb 3rd 2019

<p align="center">Research Aims and Research Objectives</p>

I'm so excited to join a research lab and started my first research topic. Before the last meeting, I worked with my mentor to learn python Scikit library, Linear Regression, Logistic Regression, Support vector Matrix. These kinds of concepts are used for my research topic about machine learning or deep learning.

At same time, my mentor send me a material for GPS RINEX. I'm started to work on the GPS detector.

This is what we do at the beginning of the three weeks. We don't have the specific research topic right now.
